

# PATIENT ROOM FLOOR CHALLENGE

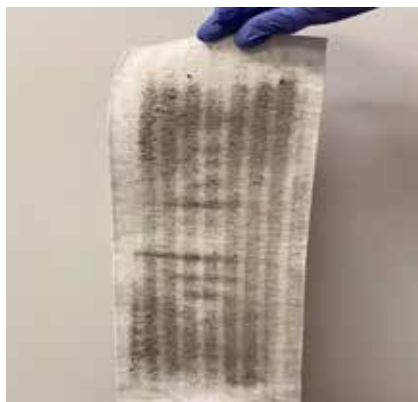

Advantex® Professional Grade Microfiber  
Makes a Proven Significant Difference

## THE CHALLENGE ACCEPTED

1. First, the EVS team cleaned a patient's room with a laundered or competitor microfiber mop system and let the floor air dry.
2. Then, again, the same patient room floor was cleaned with an Advantex® single-use microfiber mop system.
3. See for yourself the visibly filthy mop and undisputable evidence that Advantex® Mops vastly outperformed laundered and standard-grade microfiber mops.

## THE CHALLENGE RESULTS

Each picture below shows the significant dust, dirt, and grime Geerpres® Advantex® single-use microfiber mop captured **AFTER** a patient room floor was cleaned with a competitor premium single use mop, or a laundered microfiber mop.

Above pictures shows: Advantex® Single-use Microfiber Mop capturing the dust, dirt, and grime left behind after room cleaned **TWO TIMES** using a competitor's premium microfiber mop.

# PATIENT ROOM FLOOR CHALLENGE

## THE PROFESSIONAL PROVEN SOLUTION

Hospital Systems are moving to the Advantex® Single-use Microfiber Mops, Advantex® Mop Frame, and Telescoping Aluminum Handle System. Ready to take the challenge, call us today.

### ADVANTEX® SINGLE-USE MICROFIBER MOP

Best-in-class, Advantex® Single-Use Mops deliver the most solution (non-quat binding) and covers an entire patient room. Microfiber locks and lifts bioburden, dirt and contaminants away for efficient and effective cleaning. Get more floor coverage with solution and use fewer mops. Non-linting, USP 797 compliant. Patent #11045063

### ADVANTEX® MOP FRAME

The 16" Advantex Mop Frame utilizes micro hook and loop fastening to avoid lint accumulation. Unique quick connector swivels 360° for an efficient figure eight motion and flips up for easy cleaning of baseboards.

### TELESCOPING ALUMINUM HANDLE

Telescoping aluminum handle for reaching high places. The handle extends from 52" – 92". Both mopping and high duster attachments with quick connect are available to create a multi-purpose tool.

## PROFESSIONAL GRADE MICROFIBER WITH SUPERIOR EFFICACY

### FINER MICROFIBER = CLEANER FLOORS

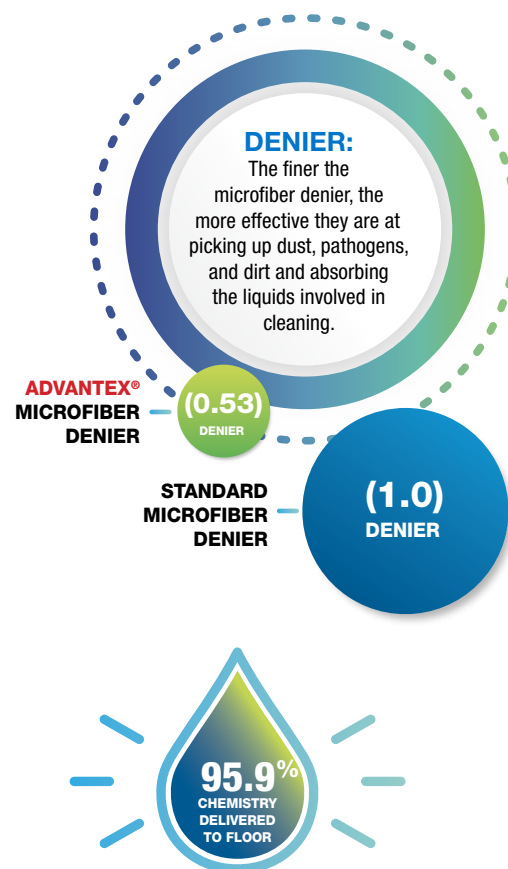

Microfiber cleaning materials blend microscopic polyester and polyamide fibers, which are split to create microscopic "hooks and loops," which scrape up and hold dust, dirt, and grime. Geerpres Advantex® microfiber is finer than industry microfiber requirements, therefore having superior efficacy. Advantex® microfiber has a denier of 0.53, about half of one (1.0) denier (typical Microfiber denier). With efficacy rates of 99.9-99.99% on pathogen removal, Advantex helps reduce the cross-contamination risks\*.

### BEST-IN-CLASS NON-QUAT BINDING = MORE CLEANING CHEMISTRY DELIVERED TO THE FLOOR

Microfiber can hold six times its weight in water. The finer the denier (of fiber thickness), the more fiber per square inch, which means it can hold and release more chemistry. The Advantex® microfiber mops are compatible with all cleaning chemistries. More effective cleaning can save lives with greater floor coverage and cleaning chemistry delivered to the floor.

### REDUCED FLOOR PATHOGENS = LOWER HAI RATE

Our customers are more confident/comfortable knowing they have reduced floor pathogens, believing this is a factor in the lower HAI rate. In addition to the financial impact, the better floor coverage reduced mop and chemistry usage while improving cleaning efficiency. Cleaning teams love these mops!

## SWITCHING SUMMARY & RESULTS

Switching to the new Advantex® Floor Solution results in cleaner floors, which can be a factor in the lower HAI rate. The new Advantex® Floor Solution system locks and lifts bioburden, dirt, and contaminants away for efficient and effective cleaning.
