

Geerpres...and the environment

At Geerpres, we are committed to continuous improvement and customer satisfaction. As a conscientious corporate citizen, manufacturing premium quality commercial cleaning products, we are dedicated to responsibly using our resources as well as safeguarding the community and environment in which we operate.

Metal Products are Eco Friendly

Steel is the world's most recycled material¹. The majority of our products are manufactured primarily with stainless steel, steel or aluminum and are 100% recyclable and environmentally sustainable. Our products are recognized worldwide as being durable, environmentally friendly and having a long service life. The North American steel industry annually recycles millions of tons of steel scrap from recycled cans, automobiles, appliances, construction and other steel products. This scrap is remelted to produce new steel.

Reducing Chemical Usage with Microfiber

Geerpres is committed to the supply and distribution of microfiber cleaning products. Microfiber is a Green Cleaning technology. The use of microfiber helps reduce the amount of chemicals that are used in the cleaning process

Environmentally Sustainable Packaging

Once complete, our products are packaged in biodegradable cartons and our adhesives are free from toxins.

Reducing Fuel Consumption and Pollution

We confine our operations largely to assembly and partner with local/regional suppliers to help reduce the environmental impact resulting from transportation.

Geerpres, since its inception, continues to be environmentally sensitive on a daily basis in all of our activities.

¹ 2005 according to the Steel Recycling Institute. The Steel Recycling Institute is an industry association that works to promote and sustain the recycling of all steel products.
