

# Flat Mop Buckets

## STAINLESS STEEL FLAT MOP BUCKET

The stainless steel flat mop design is available in two-bucket and three-bucket systems (includes buckets with lids and one sieve) and is offered in an electropolished finish.

System components interconnect to prevent spills. Handles allow for easy lifting and lids hang from bucket(s) for storage. The stainless steel sieve ensures the correct amount of disinfectant reaches the floor. The entire bucket system is autoclavable.

## MICROFIBER PLASTIC FLAT MOP BUCKET

The Geerpres® Microfiber Plastic Flat Mop Bucket holds up to 6 gallons (22 liters) and has an extra-large opening to accommodate tools up to 18" wide.

Buckets have an embossed scale (gallons and liters) to ensure you have the right volume. Optional lid available.
