

MICROFIBER FLAT MOP FRAMES

ADVANTEX® MOP FRAME

The 16" Advantex® Mop Frame makes it easy to convert your 12" and 24" flat mopping systems.

This frame utilizes micro hook and loop fastening to avoid lint accumulation. Ideally paired with the Advantex® Single-use Microfiber Mop. Unique quick connector swivels 360° for an efficient figure eight motion and flips up for easy cleaning of baseboards. No replacement parts.

CLING-ON® REVOLUTIONARY FLAT MOP FRAME

The revolutionary, new 16" Cling-On® Plastic Flat Mop Frame with Quick Connector easily converts your current mopping system.

The mop frame has molded-in spikes – the mop clings to the frame (no hook and loop strips) – and holds your launderable mop firmly in place. Addresses ongoing nuisance issue of having to replace Velcro® strips that accumulate fiber and causes the frame to lose its grip on the mop. Also compatible with the Advantex® G8 Microfiber Applicator System.

The quick connector allows the Cling-On® to swivel 360° for efficient figure eight motion and flips up for easy cleaning of baseboards. Made of 100% Post-Consumer Recycled Material. Use with 16" and 18" traditional hook and loop microfiber mops. Can be used for all types of cleaning applications such as mopping floors and washing walls.

Patent #9572472
