

Stainless Steel Downpress Wringer

The Geerpres® Stainless Steel Downpress Wringer is electropolished to make the surface very smooth – so bacteria and foreign particles have nothing to attach themselves to.

It is made from type 304 stainless steel to resist abrading, rusting, discoloring or staining in normal use. The simple, one-stroke operation makes these wringers up to three times more efficient than other designs, which boosts productivity and reduce costs.

Features include a solid stainless steel gear shaft for durability; double-staggered stainless steel gears for solid, slip-proof operation; and long-wearing stainless steel bushings where the gear shaft enters side plates. Welded and riveted construction, plus electropolished 304 stainless steel, makes these wringers as long lasting as they are effective.

Features

- Solid stainless steel gear shaft for durability.
- Double-staggered stainless steel gears for solid, slip-proof operation.
- Long-wearing stainless steel bushings where the gear shaft enters side plates.

Size

- 8-16 oz. mops
- 16-24 oz. mops

Band Options

- Standard band
- Flat band
